# SAP BUSINESS ONE

Designed specially for SMEs and multi-national subsidiaries, SAP Business One is a powerful ERP software solution that offers an affordable way to automate and manage your entire business – from CRM, sales and services to distribution, manufacturing and finance operations.

Executives and managers can have real-time access to their business data via a web browser, mobile device or traditional client-server access. With features like exception alerts, electronic approvals, workflow management, dashboard and KPI reporting, SAP Business One helps companies see clearly and react quickly. The self-service analytics tools in HANA make it possible for operational users to access, transform and visualize data in real time, without the traditional IT hand-holding.

Overview of SAP Business One:

- Multi-company, multi-currency and multi-language
- Supports rapid implementation
- Licensing options - on-premise and SaaS
- Integration with Microsoft® applications like Excel and Outlook
- IFRS compliant
- Mobile application for iOS and Android™
- Extensible without source code changes
- Pre-delivered analytics content

Inecom specialises in out-of-the-box industry best practice templates and solutions. These templates, together with our consultants' domain knowledge, ensure our customers get a faster ROI on their ERP investment.

# SAP HANA

SAP HANA is a real-time, in-memory platform that enables companies to process 'big data' in their ERP application, at the same time support operational reporting, advanced analytics and predictive modelling.

With SAP Business One, version for HANA, the ERP application is combined with business intelligence functions. In addition to ERP operational functions, the SAP HANA solution also provides:

- Enterprise search – this is a search engine within the ERP application. Users can search data, filter information, drill-down while still adhering to the authorization and security policies.
- Pre-delivered analytics content – the solution is packaged with pre-delivered dashboards and KPIs that covers sales, purchasing, logistics, production, finance and CRM. Some examples are Top 10 customers, Top 5 sales employees, Average delivery variance days, Average fulfillment days of purchase orders.
- Dashboard and KPI designer – in addition to the out-of-the-box content, users can rapidly create dashboards and KPIs using the pre-defined multi-dimensional semantic layers.
- Interactive analysis – users can slice and dice their ERP data using Microsoft Excel and pivot-table based reporting tool.
- Intelligent inventory forecast – this statistical forecasting function uses SAP Business One data to forecast inventory levels and the algorithm incorporates trends and seasonal factors.
- Cash flow forecast – an interactive financial tool to help with real-time cash flow projections based on selection criteria like specific documents, certainty levels and timeline.

## ROLE-BASED ANALYTICS

# HARDWARE AND INFRASTRUCTURE

A new ERP solution or upgrading an ERP system involves more hardware decisions than just choosing servers and data storage sizing. The modern ERP solution comprises of mobility application, e-commerce portal, integration with warehouse management and logistics system, as well as business intelligence and big data analytics. All these require the hardware and applications vendors to work closely together to provide the optimum solution.

At Inecom, we provide a one-stop solution for ever more complex ERP landscapes. Whether you need an on-premise server, cloud hosting, disaster recovery, fail-over system or virtualization of your server, we can design and deliver the infrastructure you need for your SAP Business One solution.

## IT HARDWARE

As an IT infrastructure service provider, we work with leading manufacturers and distributors to design, deliver and setup servers, backup solution and network architecture at your premises.

## CLOUD HOSTING

Inecom's cloud hosting service is designed to deliver a highly secure and reliable on-demand infrastructure for our SAP Business One customers. Hosted in Inecom's designated data center in Singapore, our cloud offering includes performance monitoring, advanced security strategies, regular back-up of our customers' data and failover infrastructure provision.

## MANAGED SERVICES

Inecom offers managed service contracts to customers to ensure the on-going performance of their IT hardware. This includes unlimited incident logs, technical support, on-site assistance and system infrastructure reviews.

## DISASTER RECOVERY

Our disaster recovery service is a cost effective, cloud-based solution that ensures high availability of your SAP system. Your data is securely stored off-site, with frequent back-up from the server at your premises to our designated data center. In the event where your server fails, the users switch to our network while your system is being recovered.

# INECOM

Inecom is a leading Asia Pacific SAP partner, with offices in Singapore, India, Australia and UAE. We are committed to delivering world-class business software solutions with our quality accredited systems implementation methodology and complete customer care services.

We are a one-stop solution provider for SAP Business One, business analytics, hardware, cloud hosting and disaster recovery solutions. Our rapid implementation methodology and industry templates like manufacturing, metal fabrication, project costing, service and repair and WMS ensure our customers get a faster ROI on their ERP investment.
